

Credit System

Credit point system is one of the important aspects while imparting education through distance mode. SSODL has designed “Credit System” to measure the efforts invested by a learner & time spent for study.

1. 1 Credit hour =30 study input hours
2. Study input or time required by learner is assessed for estimating the workload required by learner. The study input hours consist of time spent by the learner in:
 - a. Reading and understanding of the Self Learning Material (SLM)
 - b. Going through additional learning resources (PPT's/video lectures)
 - c. Going thorough past recorded sessions
 - d. Reference reading

The program wise credit points are equitably distributed among the courses under each program based on workload of study.
